PLASTIC STRAWS

EU restrictions on certain single-use plastics

(III) www uni-miskolc.hu

- From 3 July 2021, single-use plastic plates, cutlery, straws, balloon sticks and cotton buds cannot be placed
- plastic straws: tubular structures, relatively good buckling behave
- how can we reuse this?
- https://environment.ec.europa.eu/topics/plastics/single-use-plastics/eu-restrictionscertain-single-use-plastics_en

THERMAL INSULATIONS

- EPS: expanded polystyrene
 - closed-cell structure
 - ➤ rigid
 - Iow density (10-20 kg/m³)
- XPS: extruded polystyrene
 - also closed cell structure
 - but improved surface roughness and higher stiffness
 - reduced thermal conductivity
 - higher density (45-50 kg/m³)
- difference in water absorption
 - > EPS has a lot of open channel, water and ice may cause damage
 - XPS also not waterproof and vapor proof

OUR GOAL

- produce reinforced EPS material
 - cheaper than XPS
 - at least equal physical and thermal properties, than XPS
- reinforcment materials:
 - \succ plastic straws \rightarrow good choice
 - \succ wheat and straw from agriculture \rightarrow bad choice

PRODUCTION METHODS OF EPS AND XPS

	EPS	XPS	
Material	Polystyrene foam		
Production method	Polystyrene beads Heat (steam) Blowing agents (pentane, carbon dioxide) Expantion to foam	Solid polystyrene crystals Additives, foaming agents Extrusion High temperature, high pressure Continuous press Cooled down Foam \longrightarrow cut to size	
Structure	Closed cells	Completely closed cells	
Density, kg/m ³	13,5	50	
Pressure resistance, kPa	70	100-690	

THE CAMPUS OF KNOWLEDGE AND COMMUNITY SPIRIT

Steam system used for EPS production: 1: Boiler, 2: Control valve, 3: Steam header, 4: Valve, 5: Throttle valve

RESULTS FROM FEM

bilinear hardening model suitable for the reinforced EPS material

➤ values:

13

- Young's modulus: 8.1378 MPa
- yield strength: 0.321 MPa
- tangent modulus: 0.626 MPa
- differences between the measurements and analysis:
 - unbraced specimen: 8.42 mm measured and 8.3 mm simulates compression
 - stiffened specimen: 9.53 mm measured and 9.8 mm simulated compression
- thermal analysis:
 - with different CFD softwares, shows good correlation

SUMMARY

- recycling of plastic is a high proirity these days
- may have alternative or unconventional uses in various thermal insulation systems to increase strength
- we made experiments with different sizes and numbers of straws
- we proved that our idea was correct, the straws placed in the right direction increased the compressive strength of the EPS material
- future plans:
 - usage of more unconventional stiffiners
 - further development of production technology
